

# R25H

## Single End Roving for Filament Winding and Pultrusion

### PRODUCT DESCRIPTION

Single-End Rovings are produced by pulling individual fibers directly from the bushing and winding them onto a roving package ready for shipment. The uniform distribution of a proprietary sizing system ensures an excellent resin-to-glass binding through uniform distribution of the binding agent. This results in maximum strand integrity.

Single-End Rovings are manufactured using the T30® Roving state-of-the-art technology of OCV™ Reinforcements, in conjunction with statistical process control in manufacturing facilities certified to ISO 9001.

### PRODUCT APPLICATION

R25H is specifically designed for use in filament winding and pultrusion applications in polyester, vinyl ester, and epoxy resin systems. R25H maximizes strand wet out, allowing superior mechanical properties for pipes made with a continuous process. Combined with Advantex® glass, Owens Corning's trademarked corrosion resistant E glass, R25H enhances pipe life-time in chemical and sewage pipe markets. It is also safe for use in pipes used for water distribution. R25H is also suitable for pultrusion of central stiffness members for fiber optic cabling

### FEATURES AND PRODUCT BENEFITS

<ul style="list-style-type: none"> <li>• Excellent processing</li> </ul>	<ul style="list-style-type: none"> <li>• Low fuzz properties which equate to low clean-up and high machine efficiencies</li> <li>• Excellent package runout and transfer with Tack-Pak® packaging</li> <li>• Optimum Package/Pallet weight</li> </ul>
<ul style="list-style-type: none"> <li>• Multi-resin and multi-process compatible</li> </ul>	<ul style="list-style-type: none"> <li>• The R25H sizing is designed for excellent adhesion with polyester, vinyl ester and epoxy resin systems. Multi-compatibility allows a change in resin systems without the need for the time consuming effort of changing glass in the creel.</li> </ul>
<ul style="list-style-type: none"> <li>• Excellent strand opening and spreading</li> </ul>	<ul style="list-style-type: none"> <li>• Fast wet-out and high resin pick-up equating to increased quality in the parts visual aspect after molding</li> </ul>
<ul style="list-style-type: none"> <li>• Excellent laminate strength and corrosion resistance</li> </ul>	<ul style="list-style-type: none"> <li>• Provides superior pipe burst and, when used with Advantex® glass, superior lifetime to chemical corrosion.</li> </ul>
<ul style="list-style-type: none"> <li>• Available globally</li> </ul>	<ul style="list-style-type: none"> <li>• Global manufacturers can use product in all regions resulting in lower design and qualifications costs.</li> </ul>
<ul style="list-style-type: none"> <li>• Compliant with food and potable water regulation</li> </ul>	<ul style="list-style-type: none"> <li>• Suitable for use for water distribution both civil and industrial</li> </ul>

### PRODUCT AVAILABILITY

Tex
600, 735, 1200, 2400, 4400, 4800

### MECHANICAL PROPERTIES

The following data was generated using production material R25H – 2400 Tex (207 Yield):

Strand Tensiles : ASTM D 2343	Strength (MPa)	Strength (Ksi)
Anhydride/ DER 331 Epoxy resin	2710	390
Polyester F701 Resin	2860	415

Interlaminar Shear Strength NOL ring : ASTM D 2344	Dry shear strength (MPa)	Dry shear strength (psi)	shear strength Retention 72 hr boil (%)
Anhydride/ DER 331 Epoxy resin	63	9140	94 %
Polyester F701 Resin	62.8	9110	83%

### PACKAGING

Rovings are available in a single-end internal-pull package. Each pallet weighed about 1 ton. Pallets are stretch wrapped for load stability. All doffs are wrapped with Tack-Pak® or shrinkable film for protection during transport. Full doffs are available in weights between 20 kg (45 lb.) and 35 kg (77 lb.), and they can be packaged in bulk or Creel-Pak® format. More information is available in the Customer Acceptance Standards.

### STORAGE

Unless otherwise specified, it is recommended to store glass fiber products in a cool, dry area. The packaging is not waterproof. Be sure to protect the product from the weather and other sources of water. The glass fiber products must remain in their original packaging material until the point of usage. If these conditions are maintained, the glass fiber product should not undergo significant changes when stored for one year. Beyond one year after delivery, the product might evolve, specifically if stored outside the recommended conditions.

Best storage conditions are temperatures between 22°C and 23°C, and humidity between 60% and 65%.

The product should be stored in the workshop, within its original packaging, 48 hours prior to its utilization.
